scott group custom carpets

Sustainability:

To some, sustainability is a new way to do business. At Scott Group, it's what we've always done. The pure New Zealand wool in our handcrafted, luxury rugs and carpets is one of nature's most perfect materials. Along with its natural beauty, softness, and durability, it is also 100% rapidly renewable, helping your project qualify for LEED Credit 6. Even after it's shorn from the sheep, dyed, and hand-tufted into carpets, natural wool continues to renew itself. Over time, it develops a patina that maintains its color and texture, adding years to the life of your carpet. It's also naturally resistant to dirt, wear and tear, enhancing its long-term sustainability.

What's more, wool absorbs airborne contaminants, actively cleaning the indoor air you breathe by neutralizing harmful gases such as formaldehyde and sulfur dioxide. In fact, Scott Group Custom Carpets has earned CRI's prestigious Green Label Plus qualification for indoor air quality, recognizing our carpets among the very lowest emitting products on the market and meeting the EQ standards for LEED certification, (LEED Credit 4.3).

Of course, wool is naturally insulating, too, reducing heat loss through flooring while creating a more comfortable atmosphere. It also absorbs excess moisture in the room and creates an inhospitable environment for bacteria and dust mites, which can trigger allergies and asthma.

Finally, Scott Group Custom Carpets are made in the USA, where many of our customers reside. There's a good chance we are within 500 miles of you, a fact which limits the environmental impact of shipping and helps you qualify for LEED Credit 5.1.

For over 40 years Scott Group Custom Carpets has been a good steward of the environment, making our products a very green choice, no matter what color you choose.
